I'm looking for a couple of TRU students to work with myself and BC Parks conducting small mammal inventory work throughout the park system in the Okanagan. You must be mobile, responsible, seriously interested in a career in wildlife, willing to work crazy hours, and capable of confronting the noble Deer Mouse on its home turf.

I need someone to start in May and spend a month getting things organized, so previous experience in organization and networking would be a real asset. A second person will start working in June as the trapping commences. These positions will provide EXCELLENT experience in mark-recapture population estimation, research design, data crunching, handling wildlife, reporting, and networking with government and BC Parks biologists. I would be especially interested in applicants that will turn the project into a graduating essay or directed studies project come September.

If you're interested drop me an email with a resume (include some references) a short statement on why these positions would be of interest to you, and when you could potentially start. Put 'Small Mammals' in the subject line of your email. Current TRU students or recent grads only, please.

Contact me right away if you’re interested: I want to fill these positions a.s.a.p. – Karl Larsen klarsen@tru.ca
