	Percent	Count	Percent
Unsatisfactory		0	0.0%
Satisfactory		6	100.0%
Total		6	100.0%

## Student Comments:

Dr. Mol is such a nice and genuine person! He wants you to understand and succeed! He is always on time and mark assignments and paper very quick! I enjoy the class with him. I like how there are two midterms allowing you to learn and also give a chance to improve. I would definitely recommend putting more weight on homework and lab assignments since homework are due 3 times a week with a day and a half to finish them. Seem like a lot of work for the amount given. A little cringy with your old music every morning. Would definitely recommend and would love to see him as a permanent professor/instructor at our university

Mr. Mol was a really great teacher. The way he taught the class was really well done and he made sure everyone understood the material before moving on. I also found all the practice problems and practice tests that he posted before the midterms and exam extremely helpful. Overall Mr. Mol provided me with everything I needed to excel in his course.

Great attitude; makes math very approachable and less intimidating. Says positive things like "I love this class, everyone works so hard." Very approachable as a person and answers emails outside of standard business hours which is very appreciated. Solid prof.

He's very well-spoken and good at explaining concepts. Great interactivity with the class, answers students' questions without just repeating himself. His genuine appreciation for math is infectious, and as a result I'm currently considering switching to a math major. I can't think of any negatives.

His strength is his ability to make difficult topic look simple

Dr. Mol always hands assessments back over the next few days (usually the next class). He is very supportive of student's learning and makes himself available to answer questions and give one on one help.
