Student Course Evaluation Results

Course Number: MATH-1201-001 27

Course Title: Linear Algebra I 27

Faculty Name: Lucas Mol 27

Term: U2020F 27

This course is required or elective:

Field	27 Responses	
	Required	Elective
Count	17	10
Percentage	63%	37%

Overall, apart from the course content, the quality of teaching provided by the above-named instructor was:

Field	27 Responses	
	Unsatisfactory	Satisfactory
Count	0	27
Percentage	0%	100%

Student Comments:

Strengths: -well organized and prepared -Gives good explanation and examples -gives fair tests and grades appropriately -Always willing to help students understand I can not think of any weaknesses, this professor is amazing and I look forward to each class!

Good at explaining concepts, I just wish he would explain the step by step process of more. A few other students and I are sometimes confused about why he put certain numbers where and why.

Strength- Can teach well, explains clearly and makes sure the students know what he's teaching properly.

Weakness- Sometimes goes over the time limit for each class period

I am extremely happy with this professor's class and organization. Despite teaching online, he worked to engage the students and made himself available to answer questions outside of class time. His outlines were clear, he provided the materials we required in a timely manner and provided additional sources throughout the term for us to use if we needed. He is enthusiastic and fun which is great to experience in a math course.

Dr. Mol is a fantastic professor. He is very entertaining and his presence allows every student to be engaged when he is teaching during his lectures.

He was very thorough in his teaching and made complex topics very comprehensive. The class was a little fast sometimes, but that was easily made up for with the posted completed notes.

Dr Mol has done a very well job with the lectures, he made it very interesting and fun to tune in with the zoom class. I'm impressed with how this class went with the factor of COVID happening. I acknowledge that this was a big class but one thing I wished he did was interact with students more. I know it's hard to do with COVID, but I think there must be a possible way. Overall, Dr Mol did a very well job with the lecture as well as the notes given to the students. This was a good class!

Professor Mol is a knowledgeable and overall a great professor. I commend and highly appreciate his organizational skills. His notes were easy to read, and find. He would provide us with a clear explanation of the topic, the formulas and methods, the proofs of these formulas, and the examples in that order. It is all very organized. His notes are PDFs divided into sections/chapters which made it easy to study off of for tests and exams. His assignments and tests are fair. He assigns assignments after every class which is very helpful for students as it reinforces what we learned that day. He replies to his emails within 30 minutes, and answers our questions even during mid lecture. He is a fun professor who starts a few minutes early to go over any concerns, or to casually chat with students. He would show us his dog often which is always a mood booster. Great professor! I would love to take another class with Professor Mol again.

Dr. Mol is an excellent instructor. He is very passionate about the topic area he teaches and is very organized and provides clear explanation for all course material. He always answers questions respectfully and promptly, and is always very excited to teach us new things. He is available to us during his office hours and has never been disrespectful to anybody in the class. He is an amazing professor.

humor, knowledgeable and give feedback quickly

He's a great instructor

He is a very funny guy and a very good professor. He explains stuff quite well. But as most of the math teacher he always extends the class by 5-10min. Apart from that he is good. I would love to take more classes with him

Dr. Mol is really funny, he's got great sense of humor which makes his class fun to attend. His notes and style of teaching is very informative. He never misses any questions from his students.

Dr. Mol has found away to keep the class engaged and the course enjoyable. I feel I have received full value for this course and will always recommend people to take any course offered by Dr. Mol. 10/10 would take more courses from him.

Very easy-going, good at explaining concepts and making sure questions are clearly answered and will make sure answers are understood before moving on. Nothing outstanding for weaknesses, might be different if we were in a regular class setting.

Great professor! Very organized and helpful. Makes the lectures interesting and fun.

Really nice professor. Love doing maths from him. He makes every topic so easy to understand

Dr. Mol is an excellent professor. He truly cares about his students and his subject and was very available for students and setting up office hours was very easy to do so I felt that the support was always there when it was needed. He explained things very clearly and provided good notes. The class was also set up very well for online learning and the assignments and weight of tests were appropriate. Would definitely take another class with him in the future.

Very Nice with the students ...gives time to every student to present their point ..moreover the way to represent the content of the class is outstanding...I liked studying from Professor very much... I would like if the length of class may be 75 minutes or higher because now its only 50 minutes that goes very fast and covers very less content..
